

# WORLD OCEAN

An ocean is a huge body of salt water. Oceans cover nearly 71 percent of Earth's surface. They contain almost 98 percent of all the water on Earth.

There is one world ocean, but it is divided into five main areas: the Pacific, the Atlantic, the Indian, the Arctic, and the Southern, or Antarctic. Together, they can be seen as one world ocean because they have no real borders, and water flows freely between them. Smaller parts of these oceans are called seas, gulfs, and bays.

## Sea Habitat School Project

Hello, I'm Mishell, I like to swim in the sea and bath in the sun. I love having fun with my aquatic friends in the ocean. Unfortunately lots of people are polluting the ocean where I live. Can you design an underwater habitat for me full of clean water and lots of underwater plants?

## ACTIVITIES

### 1. Create and design a wind turbine

Our planet needs more renewable energy sources using things like winds as energy. This is sustainable because wind never runs out and it does not harm others on our planet.

Click on the [link](#) to find out more about wind turbines.

### 2. Underwater habitat

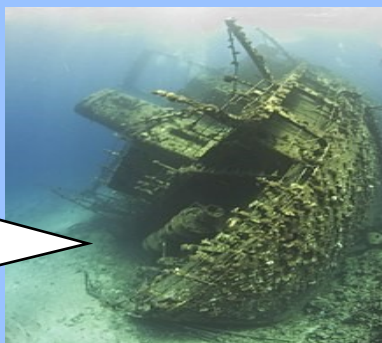

Can you find out about an underwater animal? Use the websites below to find out some amazing facts and then create a appropriate habitat for them using a shoe box.

### 3. Build a boat that floats

Oh no! This ship sank to the bottom of the sea because it couldn't float properly on the water. Can you design and make a better boat that will float on water?
