

WANTED

HAVE YOU SEEN THIS ROBOT?

Authorities are searching for this mechanical beast which was first sighted early yesterday evening. He was reported to be in the local area by a young boy who was fishing near Paddlebrook Stream. This strange creature has only been seen from a distance so it is difficult to accurately describe his appearance.

He is believed to be the height of two double-decker buses with a head that is the shape of a dustbin but much larger. On either side of his large head, there are two ears which seem to be in working order because he was witnessed listening to the sound of the sea crashing against the cliffs. Most distinctive are his large eyes, which are similar to car headlamps. Its eyes are able to change colour and have been seen to glow white, purple, red and blue.

He appears to be made up of various pieces of metal, which have been welded together to create this mechanical monster. His large, rectangular body is the same size as a cattle truck and it has two long arms attached to it. They have been described as looking like two cranes jutting out from either side and it is thought that they provide this giant with incredible strength.

Even though his whole body is covered in orange rust, he is able to move with ease and was last seen headed towards the town's outskirts, where it is believed he has been eating all of the barbed wire fences, gates and tractors that he has found.

It is extremely important that we find this monstrosity before it is too late and our whole town is destroyed!
